

“SOS HEAT”: USEFUL TIPS TO BEAT THE HEAT, EVEN IN CARWASH

When summer, sun and heat come, also carwashes, which, as much as considered among the most envied workplace due to their contact with water, must be careful to different aspects.

Among these, the main one threaten the washing success and, therefore, the perception that the end consumer can have.

It's not just the cold weather that cause trouble to the operators working in this sector. High temperatures can hinder the daily activities in any carwash as well. Allegriini team took note of some small but **essential devices that any carwash operator should follow** to avoid damaging... sunstrokes.

#1 wash in the shade

Choose AZ Soft!

As soon as the temperature exceeds 30°, be sure to wash the car only if it has not been exposed to sun for long.

On the contrary, indeed, high temperatures of the car surface would dry the detergent quickly, facilitating the formation of marks. It is better to place the car in the shade and wait 10 minutes before proceeding.

With motorcycles, be careful to the aluminium parts and the most delicate plastics.

Play safe with **AZ Soft**, a broad-spectrum and buffered pH detergent for the wash of motorcycles. The absence of free alkalis make it suitable for the summer season thanks to its stain-resistant properties.

#2 Use active-foam products in self-service carwashes

If the bodywork is overheated, it is not advisable to wet the car in an attempt to cool it down: the thin layer of water would lower the detergent's performance. If you won't get wrong, choose the **active-foam** products of the new **Neos** line; with a higher drying time, it avoid running the risk of staining the bodywork.

It is recommended to spray the product homogeneously and abundantly bottom up.

For a pleasant and scented wash experience (the visual effect in the pre-wash phase is well known), the scented version **Neos Active Foam Frizz** is to prefer on self-service carwashes.

Choose Neos Active
Foam Frizz!

“SOS HEAT”: USEFUL TIPS TO BEAT THE HEAT, EVEN IN CARWASH

#3 Remove insects from the bodywork

Choose **Go-Go Insect!**

Insects, birds excrements and plants secretions may be difficult to remove, especially if you fear to stain the bodywork allowing any detergent product to work. Among the Allegrini stain-resistant summer products **Go-Go Insect** is a must have, it's a guarantee against organic residue on bodywork, bumpers, rear view mirrors, faceplate and glasses. With excellent stain-resistant properties, it guarantees the best performance if you let it work for long, even in intense heat periods. Ideal to be used while waiting for car prewash phase.

#4 Clean the windshield from flies

If the flies don't come off easily, **Bi-Moschi** is the trump for the windshield.

It's a biphasic concentrated detergent that allows to successfully remove insects and dirt from the windshield thanks to its two-component layers: the first, degreasing, wetting and lubricant, and the other one, specific active detergent for the detachment of residues.

If correctly diluted in the window washer tank, it shall facilitate the windshield wiper sliding, reducing the friction with glass, and releasing a pleasant scent.

Choose **Bi-Moschi!**

#5 Purify and fight unpleasant odours

Due to the temperatures increasing, in addition to the malfunctioning of the purifier, wastewater could take bad odours to the car washes, influencing, therefore, the customer perception.

That is why Allegrini team recently developed a bacterial and natural odours-neutralizing products line able to optimise the functioning of the purifier, conforming to the current legislation.

Composed of a powdered bacterial additive, a liquid deodoriser one and a biomasses enhancer, **All Bacti line** is ready to come to the rescue of these issues and to assure an excellent performance of the depuration system, improving the demolition of the pollutants.

**Beat the heat with Allegrini advices.
Entrust to its solutions, every month of the year!**
